

STISIM Drive® M4000 Console

The M4000 Console is STISIM Drive’s flagship, with a feature set that is second-to-none. Ruggedized chassis with fully adjustable driver positioning, handholds, ergonomic touch-screen operator console and optional hand controls. The realistic steering force-feedback, 135-degree field-of-view displays and immersive audio system engages the subject in the driving experience. Clinical staff and researchers will appreciate the movable and height-adjustable operator console that provides situational awareness of the drive while still allowing observation of the subject. The console is built to withstand high duty-load clinical and research environments.

| | |
|---------------------------------------|---|
| Environment | Commercial facilities with high subject duty-load, 24x7 operation |
| Use Cases | Clinical Therapy, Research |
| Form Factor | Console with non-slip diamond-plate flooring and locking casters for mobility through standard doorways. Separable front/back for accessibility |
