STISIM Drive® M2000 Desktop

In the M2000, STI provides a turnkey, budget-minded solution for Research and Driver Training. The M2000 includes three driving displays for a 135-degree field-of-view, and commercial off-the-shelf game-type driving controls. All components and wiring are provided for quick and easy installation in the user's environment. Three-screen driver displays are recommended for subject immersion and engagement, but the software also supports using only a single screen.

Environment	Laboratory or instructional facilities, 8x5 operation
